ServiceLocator.Get< T >

Utopia.Core.Services.Hierarchical
ServiceLocator.IsRegisteredInHierarchy< T >

Utopia.Core.Services.Hierarchical
ServiceLocator.TryGet< T >

Utopia.Core.Services.Hierarchical
ServiceLocator.TryGet

```
graph LR; A[Utopia.Core.Services.HierarchicalServiceLocator.Get< T >] --> D[Utopia.Core.Services.HierarchicalServiceLocator.TryGet]; B[Utopia.Core.Services.HierarchicalServiceLocator.IsRegisteredInHierarchy< T >] --> D; C[Utopia.Core.Services.HierarchicalServiceLocator.TryGet< T >] --> D;
```

The diagram illustrates a mapping or refactoring process. On the left, there are three separate boxes, each containing a method call from the `Utopia.Core.Services.HierarchicalServiceLocator` class. These are: `Get< T >`, `IsRegisteredInHierarchy< T >`, and `TryGet< T >`. Blue arrows point from each of these three boxes to a single box on the right. The box on the right, which has a gray background, contains the method call `TryGet`. This suggests that the three methods on the left are being consolidated or mapped to a single `TryGet` method on the right.
